

396 Jinko Solar panels, Samil inverters

## 99kW Installation Fenning Timber, Bairnsdale

Our installation of 396 Jinko Solar panels with Samil Power Inverters and mounting equipment on the main building of Fenning Timber reduced their carbon footprint by up to 15%.

The 99-kilowatt system is connected to the company's timber drying kilns that operate 24 hours a day, seven days a week.

If more solar panels were added the mill would be officially classified as a power plant, and the installation attracted the attention of the local print media.
