

96 Jinko Solar panels, Samil inverters

24kW Installation PR Cootes, Pakenham

Solar Sunwerx installed a 24kW System using 96 Jinko Solar panels and Samil inverters on the main building of PR Cootes in Pakenham.

This system is expected to produce an average of 86kW hours per day, significantly reducing both their carbon footprint and their energy costs.

With consistently rising electricity prices and taking advantage of tax incentives for solar businesses, the system will pay for itself in 5 years.
